

Juan Paladea

Full-stack Developer — APIs, Automation & AI Agents

Buenos Aires, Argentina (UTC−3) · Available for remote work · C2 English

juanpaladea5@gmail.com · juanpaladea.com.ar · github.com/JuanPaladea · linkedin.com/in/juan-paladea · [book a call](#)

Full-stack developer who ships complete products — API, database and interface — with a centre of gravity on the backend. On the Customer Success team at **Chatty**, a WhatsApp CRM platform, I take clients through implementation and build the AI agents, automations and custom metrics they run their sales on. In parallel, five years inside a pediatric pathology research institute — invoicing diagnostic and genomic services, regulatory and bioethics records, and the IT behind them — after training as a radiology technician at the University of Buenos Aires. I work in **Node.js**, **TypeScript**, **PostgreSQL** and **React**, and model operational and clinical domains from experience rather than from a spec.

EXPERIENCE

Customer Success

Oct 2025 — Present

Chatty — WhatsApp CRM & automation platform · Buenos Aires (remote)

- Guide clients through platform implementation and ongoing support, from onboarding to day-to-day operation.
- Design and build the AI agents and automations that handle their customer conversations at scale.
- Set up custom metrics and advise clients on how to act on them, tying campaign and sales performance back to concrete changes.

Software Developer

Dec 2022 — Present

Self-employed · Buenos Aires (remote)

- Design and ship web products end to end: API design, database schema, frontend and deployment.
- Build RESTful services in Node.js, TypeScript and Express, with JWT authentication, automated tests in Jest and OpenAPI documentation through Swagger.
- Work with PostgreSQL and MongoDB for data modelling, and React with Vite for client applications.
- Every project is publicly deployed with its source available; freelance work via Upwork and direct clients.

Administration & IT

Feb 2021 — Present

Multidisciplinary Institute for Research in Pediatric Pathologies (IMIPP) · Buenos Aires

- Handle invoicing and collection for high-value technological services — diagnostic, genomic and educational — giving me direct working knowledge of clinical billing.
- Manage procurement, supplier payments and financial tracking of assets and liabilities across operational and scientific accounts.
- Maintain regulatory and safety documentation: scientific project registration and bioethics protocol compliance.
- Keep laboratory equipment inventories and the institute's IT infrastructure running; support the publication of scientific work.
- Built and maintain the institute's public website (React + Firestore), in production today.

SELECTED PROJECTS

Hospital Backend — clinical data API

[API docs](#) · [Code](#)

Node.js · TypeScript · Express · PostgreSQL · JWT · Swagger

- RESTful API managing patients, studies and billing, modelled on workflows I handle day to day at the institute.
- JWT sessions with bcrypt-hashed passwords, file uploads for study results and payment proofs, full Swagger documentation. Deployed on Render.

IMIPP — research institute website

[Live site](#) · [Code](#)

React · Vite · Tailwind CSS · Firebase/Firestore

- Public site for the research institute where I work, in production. Content is served from Firestore so the team publishes papers, news and services without a developer in the loop.

En una nota · Ensalada mixta — music party game

[Live](#) · [Code](#)

Vanilla JavaScript · Vite · IndexedDB · Netlify

- A finished product on its own domain: 11 curated playlists with 350+ songs, offline playback with custom audio persisted in IndexedDB, scoreboard and history in the browser.
- Built with zero runtime dependencies as a deliberate constraint.

Movie Reservation System — backend

[Code](#)

Node.js · Express · PostgreSQL · JWT · Jest

- Movie, seat, showtime and reservation management with role-based authorization and unit-tested endpoints.

TECHNICAL SKILLS

Languages	JavaScript, TypeScript, Python, SQL, C, HTML, CSS
Backend	Node.js, Express, Flask, REST APIs, JWT, Jest, Mocha, Swagger/OpenAPI
Databases	PostgreSQL, MongoDB, MySQL
Frontend	React, Vite, Tailwind CSS
Tools & cloud	Git, GitHub, Claude Code, AWS, Firebase, Vercel, Netlify, Render
Automation & AI	AI agents, conversational flows, workflow automation, WhatsApp Business API, custom metrics and funnels

EDUCATION

Radiology Technician

2018 — 2021

University of Buenos Aires, School of Medicine

- Completed degree with clinical practice in hospital environments, working alongside physicians, technicians and patients.

Computer Science — two years of coursework

2022 — 2023

University of Buenos Aires, School of Natural and Exact Sciences

- Algorithms, data structures and computing fundamentals. Moved to self-directed study to keep it compatible with full-time work.

Self-directed software development

2021 — Present

FreeCodeCamp · Codecademy · HackerRank · LeetCode

CERTIFICATIONS

- **EF SET English — C2 Proficiency** · Nov 2024 · [certificate](#)
- **CS50x, Introduction to Computer Science — Harvard University** · 2024 · [certificate](#)
- **Backend Programming — Coderhouse** · Jul 2024 · [certificate](#)
