# Juan Paladea

## Full-stack Developer — APIs, Automation & AI Agents

Buenos Aires, Argentina (UTC−3) · C2 English
juanpaladea5@gmail.com · juanpaladea.com.ar · github.com/JuanPaladea · linkedin.com/in/juan-paladea · book a call

Full-stack developer who ships complete products — API, database and interface — with a centre of gravity on the backend. On the Customer Success team at **Chatty**, a WhatsApp CRM platform, I take clients through implementation and build the AI agents, automations and custom metrics they run their sales on. In parallel, more than five years inside a pediatric pathology research institute — invoicing diagnostic and genomic services, regulatory and bioethics records, and the IT behind them — where **Vialo**, my management platform for research laboratories, was born. Trained as a radiology technician at the University of Buenos Aires. I work in **Node.js**, **TypeScript**, **PostgreSQL**, **React** and **Next.js**, and model operational and clinical domains from experience rather than from a spec.

## EXPERIENCE

### Customer Success

Oct 2025 — Present

*Chatty — WhatsApp CRM & automation platform · Buenos Aires (remote)*

- Guide clients through platform implementation and ongoing support, from onboarding to day-to-day operation.
- Design and build the AI agents and automations that handle their customer conversations at scale.
- Set up custom metrics and advise clients on how to act on them, tying campaign and sales performance back to concrete changes.

### Software Developer

Dec 2022 — Present

*Self-employed · Buenos Aires (remote)*

- Design and ship web products end to end: API design, database schema, frontend and deployment.
- Build RESTful services in Node.js, TypeScript and Express, with JWT authentication, automated tests in Jest and OpenAPI documentation through Swagger.
- Work with PostgreSQL and MongoDB for data modelling, and React with Vite for client applications.
- Every project is publicly deployed; freelance work via Upwork and direct clients.

### Administration & IT

Feb 2021 — Present

*Multidisciplinary Institute for Research in Pediatric Pathologies (IMIPP) · Buenos Aires*

- Handle invoicing and collection for high-value technological services — diagnostic, genomic and educational — giving me direct working knowledge of clinical billing.
- Manage procurement, supplier payments and financial tracking of assets and liabilities across operational and scientific accounts.
- Maintain regulatory and safety documentation: scientific project registration and bioethics protocol compliance.
- Keep laboratory equipment inventories and the institute's IT infrastructure running; support the publication of scientific work.
- Built the institute's website. This role is where Vialo, my laboratory management platform, was born.

## SELECTED PROJECTS

### Vialo — management platform for research laboratories

Live

*Next.js · TypeScript · Supabase · PostgreSQL · MCP*

- Born from my role as staff at IMIPP: samples, equipment, supplies, temperatures and protocols in one place.
- Each laboratory isolated with row-level security, a change history kept by database triggers, and a public API and MCP server that share the same permissions.

### Libelulis — online store for handmade pieces

Live

*Next.js · TypeScript · Supabase · PostgreSQL · Netlify*

- One-of-a-kind pieces reserved for 48 hours in a single transaction, orders through WhatsApp, and a panel for orders, sales, costs, customers and supplies.

### En una nota · Ensalada mixta — music party game

Live · Code

*JavaScript · Vite · PostgreSQL · Netlify Functions · IndexedDB*

- 16 curated playlists with more than 1,000 songs, built without a framework, with offline play using audio stored in IndexedDB.
- Google accounts and a ranking the database verifies step by step, so the browser never computes a score.

### Hospital Backend — clinical data API

API docs · Code

*Node.js · TypeScript · Express · PostgreSQL · JWT · Swagger*

- REST API for patients, studies and billing, modelled on workflows I handle every day, with JWT sessions, file uploads and Swagger documentation.

## TECHNICAL SKILLS

| | |
|---|---|
| **Languages** | JavaScript, TypeScript, Python, SQL, C, HTML, CSS |
| **Backend** | Node.js, Express, Flask, REST APIs, JWT, Jest, Mocha, Swagger/OpenAPI |
| **Databases** | PostgreSQL, Supabase, MongoDB, MySQL |
| **Frontend** | React, Next.js, Vite, Tailwind CSS |
| **Tools & cloud** | Git, GitHub, Claude Code, AWS, Firebase, Vercel, Netlify, Render |
| **Automation & AI** | AI agents, conversational flows, workflow automation, WhatsApp Business API, custom metrics and funnels, MCP servers |

## EDUCATION

### Radiology Technician

2018 — 2021

*University of Buenos Aires, School of Medicine*

- Completed degree with clinical practice in hospital environments, working alongside physicians, technicians and patients.

### Computer Science — two years of coursework

2022 — 2023

*University of Buenos Aires, School of Natural and Exact Sciences*

- Algorithms, data structures and computing fundamentals. Moved to self-directed study to keep it compatible with full-time work.

### Self-directed software development

2021 — Present

*FreeCodeCamp · Codecademy · HackerRank · LeetCode*

## CERTIFICATIONS

- **EF SET English — C2 Proficiency** · Nov 2024 · certificate
- **CS50x, Introduction to Computer Science — Harvard University** · 2024 · certificate
- **Backend Programming — Coderhouse** · Jul 2024 · certificate
